<b>Inspection Report No.:</b>	<b>H-28873</b>
<b>Alco Sales/Engineering No.:</b>	<b>30068-1-E</b>
<b>APEGGA Permit to Practice No.:</b>	<b>P10702</b>
<b>Alco Shop Work Order # :</b>	<b>24024</b>

---

The above-mentioned elevator bushing required a Level IV inspection (as per Canadian Association of Oilwell Drilling Contractors, R.P. 2.0), applicable repairs, and certification for service.

A magnetic particle (MT) inspection was conducted on Jan 09, 2013, after the elevator bushing was completely disassembled and sandblasted.

Repair procedures were developed based on the MT inspection report as well as a thorough visual examination performed by qualified personnel with Alco Inc.

Based on the final inspection on Jan 09, 2013, it is our opinion that the elevator bushing is a safe operating unit and may be returned to service within the manufacturer's original rating and specification.

This certification is valid for a period of 500 operating days, as per the recommendations provided by the Canadian Association of Oilwell Drilling Contractors, or until the elevator bushing has been damaged either as a result of operation, transportation or handling.
